

Acronis Drive Monitor Predicts Hard Drive Failure

Acronis Drive Monitor can help predict when a hard drive is about to fail, giving you the chance to back up your data before disaster strikes.

Acronis Drive Monitor gives users extra time to react in order to save data contained on disk devices and to arrange for their replacements.

Acronis Drive Monitor checks disk health in the following three categories:

- ❖ State and health of physical drive
- ❖ Critical events
- ❖ State of disk backups
