

## CHANGE THE HOMEPAGE IN EDGE

The homepage in Edge is the page that loads automatically each time you start this browser. You can easily change the homepage and make it anything you want. It can be any web page on the Internet. It can be the default page provided by Microsoft when you install Windows 10, the current page that's loaded in the active tab, or a new, empty tab.

To change the Edge homepage, follow these steps:

1. Start Edge.
2. Click on the More tab (represented by the three horizontal dots in the upper right corner).
3. Go to Settings, then click the bullet for *A Specific Page or Pages*.
4. Enter a Web address in the *Enter a Web address* box, then click the Plus sign.
5. Close Edge.
6. Now when you open Edge, your desired homepage will open.
