

CHANGE THE NAME OF A LEGACY APP

It is possible to change the name and the look of a legacy program that appears on the Start Menu. (A legacy program is one that was created prior to Windows 8.) Generally, only a limited number modern applications (one that was created since the introduction of Windows 8.0) can be renamed, or their icons be modified. Microsoft determines which files can be changed.

1. While on the Start Menu, right-click on any legacy program that you want to change and click *Open tile location*.
2. After the program's file opens in its hidden location, right-click on it and click *rename*.
3. To change the look of the icon, right-click on it, go to *properties*, click on *Change icon*, and choose from those available.
4. Click OK.
