

CONFIGURE WINDOWS HELLO IN WINDOWS 11(OPTIONAL)

If your PC is outfitted with a Windows Hello-compatible fingerprint reader or webcam, you can configure it to sign you in to your Microsoft account using either biometric capability. This can be quicker and more convenient than using a password. To do so, open Settings (WINKEY + I) and navigate to Accounts > Sign-in options. Here, you will see entries for Facial recognition (Windows Hello) and/or Fingerprint recognition (Windows Hello), depending on the capabilities of your PC.
