

## **CONTROLLING YOUR INTERNET EXPLORER'S CACHE**

By default, your Internet Explorer's Cache (storage area for copies of webpages, images, and media for faster viewing later) wants to consume ridiculous amounts of your hard drive space.

Open Internet Explorer, select **Tools**, then **Internet Options**. Under **Browsing History**, click the **Settings** button and select a reasonable size for this cache area. Generally speaking, 5 Mbytes to 10 Mbytes is adequate.
