

DESKTOP ON WINDOWS 11

The Desktop is largely unchanged from that of Windows 10, and you will find the same basic functionality, with the same default icons—Recycle Bin and Microsoft Edge—as before. Like other top-level interfaces in Windows 11, the Desktop has been updated with new wallpapers and the new design.

Context menus—which are accessed as before by right-clicking the Desktop or icons on the Desktop—are simplified, with fewer choices than before, graphically updated, and feature the same rounded corners seen in Windows and other controls.
