

GET RID OF BLOATWARE THAT COMES WITH YOUR COMPUTER

PC Decrapifier is a program that scans your computer for programs that are commonly installed on new computers, otherwise known as crapware or bloatware, and allows you to easily remove them.

In order to generate additional revenue, many manufacturers preinstall 3rd party programs on new computers. These programs use up hard drive space and consume memory and CPU resources. This causes your computer to operate less efficiently as it should.

This is where a program like PC Decrapifier comes to the rescue. PC Decrapifier will scan your computer for common preinstalled programs and other products that are considered crapware. You then have the ability to select the programs you wish to uninstall and with the click of a button automatically uninstall them.
