

INKING & TYPING PERSONALIZATION IN WINDOWS 10

As part of the inking and typing feature, Windows collects unique words such as the names you write and saves them in a personal dictionary stored locally on your device. This dictionary helps you type and ink more accurately.

Windows 10

In Windows 10, go to “**Settings > Privacy**” and select **Inking & personalization** from the left side. Now, toggle the respective button on the right side to turn this feature on or off as per your requirement.

You can access and view the user dictionary by clicking on the ‘**View user dictionary**’ link.

You can manage the info for all your devices by clicking on **Go to Bing and manage personal info for all your devices**. This will take you to the Bing page where you can manage [Bing privacy settings](#) like personal info, saved browsing history, interests, places, and your settings with Cortana.
