

INSTALL THE APPLICATIONS YOU NEED IN WINDOWS 11

While Windows 11 ships with a fairly robust selection of apps, most people will need to install other Microsoft and third-party apps so that they can be productive. Many of these apps are available from their respective websites.

But increasingly, many of the apps you rely on can be found in the Microsoft Store as well. And if you've purchased or downloaded those apps from the Store in the past via your Microsoft account, they will be available in your library so you can find them again more easily.

To find your previously purchased and downloaded Store apps:

- a. Open the Store app.
- b. Select Library in the navigation pane.
- c. Then select the Apps button to display only your apps.
