

Malwarebytes Anti-Exploit: Another Protection for Your Machine

We all know that Malwarebytes is a great anti-malware program, one that is universally hailed by pros and casual users alike as a program that belongs on everyone's protection and security list. From the same vendors, we have [Malwarebytes Anti-Exploit](#). The free version shields web browsers like Internet Explorer, Chrome, Firefox, Opera, and their plug-ins like Flash and Silverlight, as well as Java from harm. The paid version shields more applications, including the Adobe PDF reader and Microsoft Office applications.

Anti-exploit programs can help protect you from serious attacks, and Malwarebytes Anti-Exploit offers a good free version, is easy to set up — just install it — and provides solid protection. Every Windows user can get additional protection against the main attacks online — browser and plug-in exploits — and should install this. It's a good form of defense against all these Flash 0-days.
