

MICROSOFT'S FLUENT FONTS: CALIBRI AND SITKA

Microsoft Fluent Fonts are variants of the Microsoft fonts, Calibri and Sitka Small, which are intended to help readers with visual crowding. Visual crowding is sometimes associated with dyslexia. Regardless of the font size used, each word is spread out horizontally, as shown in the example below.

This is an example of fluent Calibri.

This is an example of standard Calibri.

Once either or both of these fonts are downloaded and installed on a computer, they will be available for use in popular word processing programs such as Microsoft Word, Apache OpenOffice, LibreOffice, and Kingsoft.
