

## NEARBY SHARING: TO SHARE FILES, DOCUMENTS, AND LINKS

Nearby Sharing is a Windows 10 feature that lets you share files, documents, and links to other nearby Windows 10 devices. It uses the WiFi and Bluetooth networks for transferring the files wirelessly. Now you don't require USB drives to share the data with your nearby family members or friends. You can do that seamlessly using Windows 10 Nearby Sharing.

To use Nearby sharing, both PCs—the one you're sharing from and the one you are sharing to—must have Bluetooth and must be running Windows 10.

To enable Nearby Sharing, follow these steps:

1. Type “nearby sharing” on the windows search bar and click on the suitable icon that appears above to launch its settings.
2. Click on “shared experience” in the left column
3. In the center column, turn on *Nearby Sharing* and *Share across devices*.
4. After enabling it, you now need to right-click on the file you want to transfer and select *Share*.
