

QUICK STORAGE MANAGEMENT

Microsoft has beefed-up the storage analysis feature in Windows 10's so you can find what's eating up space.

Navigate to *Windows + I > System > Storage*. It'll bring up a screen that shows your disk usage based on the various folders you have on your PC—Apps & Games, Pictures, Documents, et cetera. Clicking on any folder brings up various management tools; the Apps & Games section will bring up a list of installed programs that you can right-click and uninstall, you can delete Temporary Files with a single click, and so on.

This new feature is great for a broad-strokes picture and cleaning house quickly.
