

SHAKE IN WINDOWS 11

Windows 11 has a feature called Shake that lets you grab any window's title bar with the mouse and then shake it in any direction to minimize all other open windows. However, this feature is disabled by default, so you need to enable it first.

To do so, open Settings (WINKEY + I) and navigate to System > Multitasking. Then, find the setting titled "Title bar window shake" and set it to On.
