

Trustworthy Solutions to Computer Problems

Why pay more than you should for software to fix your computer problems? Here are two solutions that are highly regarded and are free. You may download and install either of these products. *Just don't have them running in the background.*

Run each one of them on demand. The key is to run them manually, generally once a month for maintenance!

CCleaner (<http://www.piriform.com/ccleaner>) is a popular, tried-and-true computer repair/maintenance software package. It cleans and optimizes Windows registry entries to speed up operations and prevent system errors.

Privazer (<http://www.privazer.com>). According to nationally recognized tech expert Bob Rankin, PrivaZer is a hard drive clean-up utility on steroids. It gets rid of junk files and wipes away traces of activity that could compromise your privacy. Maybe you think that sounds like some other program you've been using, but according to Rankin, PrivaZer does much more. This is definitely a product you can use with confidence.
