

UNINSTALL PROGRAMS YOU DON'T USE

Right-click on the Start button, then left-click on Programs and Features. Find the list of installed programs and uninstall programs you don't use and don't need. This can help speed up your PC, as those programs might include background processes, autostart entries, system services, context menu entries, and other things that can slow down your PC. It'll also save room on your hard drive and improve system security — for example, you definitely shouldn't have [Java](#) installed if you're not using it.
