

WHAT IS MICROSOFT COPILOT?

Microsoft Copilot is an AI-powered assistant developed by Microsoft. It serves as your everyday companion, assisting you with various tasks. Here's what you need to know:

- a. **Conversational Chat Interface:** Copilot provides a conversational chat interface where you can interact with it using natural language. You can ask questions, request information, and give prompts.
- b. **Search and Information Retrieval:** Copilot allows you to search for specific information. For instance, you can ask it about facts, definitions, or details related to various topics.
- c. **Text Generation:** You can use Copilot to generate text. For example, if you need a concise summary of a new article, you can ask Copilot to summarize it in just a few sentences.
- d. **Image Creation:** Copilot can create images based on text prompts. Describe what you want, and it will generate an image accordingly.
- e. **Code Writing:** Copilot is proficient in writing code. It supports multiple programming languages, including JavaScript, C, and Python. You can ask it to write code snippets for you.
- f. **Plug-Ins and Integration:**
- g. **Copilot Website:** You can use Copilot on the Copilot website. Here, you can also activate plug-ins like OpenTable for restaurant reservations and Kayak for travel searches.
- h. **Windows Sidebar:** When using Copilot in Windows, you gain additional powers. You can change Windows settings (e.g., dark mode, volume level) and ask it to summarize selected text on your desktop.
- i. **Bing Search and Bing Mobile App:** Copilot is available within Bing, allowing you to switch between AI and regular search.
- j. **Edge Web Browser:** The Edge browser sidebar includes separate buttons for text interactions and image creation with Microsoft Designer.
- k. Remember that Copilot is continually evolving, so its capabilities and features may change over time.
