

WHEN WEBSITES CONSTANTLY OPEN VERY SLOWLY IN YOUR EDGE BROWSER

Pinpointing the exact reason for sluggish performances from your browser is difficult. However, resetting Edge to its original settings can help clear corruptions that can impact performance.

Resetting Microsoft Edge is not like resetting other browsers, however. Edge is a part of the Windows operating system, and cannot be uninstalled. There are different ways to tackle this problem, but you should try the basic methods first.

Open the “Settings” menu by clicking the three horizontal dots in the upper right corner of the Edge window and then click “Settings.”

Under Clear browsing data, click “Choose what to clear” and then click “Show more.” There are a lot of data types here. Select them all and click “Clear.” Restart your PC and re-open Edge for a clean slate.
